PZEV (Partial Zero Emission Vehicle)

A PZEV is the cleanest-running gasoline-powered car on the market today and has been developed to meet California vehicle emissions standards – the most progressive and stringent standards of any state or province in North America. The California Air Resources Board defines a PZEV as one that meets their state's Super Ultra Low Emissions Vehicle (SULEV) tailpipe standard, which is 90% cleaner than the average new automobile. In addition, a PZEV must have zero evaporative emissions, which are produced when fuel evaporates. This combination makes the PZEV one of the cleanest, gas-powered vehicles on the planet and a strong combatant in the fight against smog.

At Subaru, we are committed to playing a key role in the fight to protect our environment and the PZEV is a prime example of this commitment. The Subaru PZEV has such stringent pollution controls and the fuel-burning process is so complete, the exhaust produced can actually be cleaner than the air outside. In certain cases, the PZEV is even cleaner than some hybrid or alternative fuel vehicles.

Incredible environmental benefits, no compromise in driving pleasure: That's the definition of a win-win.
